**Camp Fallujah, Iraq.** NMCB 28's MSR/ASR repair team works nights to repair holes in the Main Supply Route and Alternate Supply Route caused by IED explosions. The holes are filled with buckets of QuikCrete mixed onsite and marked with stamps and spray paint so that military traveling the route will recognize the repairs as legitimate.

EO3 Hunsberger finds great satisfaction in being part of the team. "The team is like a family, always looking out for each other and taking care of each other. Brock is like a brother, Dugger is like the papa bear, Wickert is like the overprotective mother. If we have problems, we take care of it together. Besides the team, we get a great sense of accomplishment because you're out there making it easier on our troops to travel these roads and get from one place to the other safely."
